**You'll never have to Paint and Repair your Exterior walls ever.**

### VINYL CLADDING DETAILS AND PRICE LIST

**Wall Cladding you can**

**Count On**

With classic good looks and guaranteed durability, Select Vinyl Cladding is Australia's ultimate wall cladding for home building, construction, renovations, extensions and additions,

#### Eye-Catching Exterior Cladding

Duratuff Select's new generation of Vinyl Wall Cladding offers rich modern colours with wood grain textures to turn a house into a home. Exterior cladding that never needs painting means you can enjoy the look of real timber for years, with none of the maintenance.

#### Performance Guaranteed Vinyl Cladding

Engineered to the toughest conditions and built to withstand driving rain, wild winds and extreme heat, Duratuff select is exterior cladding that protects your family and your investment. With a unique 180 wind lock system, all cladding panels are securely engaged while still allowing expansion and contraction, which is critical to withstand weather extremes.

#### House Cladding With a 50 Year Warranty

Duratuff select vinyl wall cladding is built to last, we are so confident in this that we offer a 50 year warranty. All Austech wall cladding is extensively tested so we know it won't rot, peel, dent, split or crack.

#### Eco Friendly Exterior Cladding

Vinyl cladding comes with fully protected, CFC free, solid foam insulation built onto the individual weatherboards. Insulated wall cladding protects your family and the environment by literally wrapping your house in isolation. Duratuff select vinyl wall cladding aims to improve your homes energy efficiency and improve your comfort.

Vinyl outperforms most other cladding products. download the independent Vinyl Siding Institutes Green Report for more information on why vinyl is the green choice for your next project.

### Data Sheet Vinyl Cladding: Insulation & R-Value

External Products offer a wide range of vinyl cladding. Duratuff Select uses a unique locking system that guarantees total weather protection. With a fully secure, CFC-free solid foam insulation backing built into the cladding, variation in temperatures are significantly decreased resulting in cooler summers and warmer winters

. In turn, this will result in higher energy efficiency and lower energy bills . In addition, selecting Duratuff Vinyl Cladding will provide further environmental benefits such as reducing power consumption to manage internal temperatures and a minimised carbon footprint.

Duratuff Select is manufactured to AS/NZS 4256.4, the highest guarantee of a quality product. Duratuff has the ability to significantly add to the insulation qualities of a home. Working on the theory of still trapped air as an insulation component, when installed correctly over existing timber or fibro walls, or onto new framework with appropriate underlay, this will create an air gap which acts as a highly effective insulator. This may be

further enhanced by using batts as an in-wall insulator. This 'still air' principle is regularly used when attempting to achieve higher R-Values.

The Duratuff Select Vinyl Cladding boards come with a lightweight polystyrene foam backing that allows for considerable savings in energy expenses. If in-wall insulation is used in conjunction with foamed-backed Duratuff Vinyl Cladding then an R-Value of around 3 should be gained. Significantly exceeding an approximate R-Value of 1.4 when the cladding is installed over framework with an underlay of fibro or plywood

Duratuff Selects Vinyl Cladding has many benefits. Amongst them is the polystyrene foam backing which adds a layer around the entire project without any extra effort or mess. This being a major advantage for not only the builders, but also the homeowners and our planet. Make the ultimate choice today with Duratuff Select Vinyl Cladding.

## SPARK BUSINESS GROUP PTY LTD (Vinyl Cladding) Data Sheet

### 9 Reasons Why Duratuff Select Vinyl Cladding is Green

The green building movement is well underway and many builders, developers and home-owners are evaluating a variety of green building standards to determine how to build a green home. Duratuff Select Vinyl Cladding engineered for sustainability to meet today's environmental challenges and the highest Australian standards.

#### **Can Contribute To Points In Green Building Certification Programs:**

Vinyl cladding has the potential to earn more points than other exterior cladding in leading green building certification programs. Vinyl cladding outperforms most other exterior cladding in almost all life

-cycle stages for environmental and economic performance.

#### **Boosts A Home's R-Value:**

Insulated vinyl cladding can increase the effective R-value of a wall by 10–15 percent compared to traditional vinyl cladding. This added R-value reduces energy consumption over the lifetime of the building or home and reduces its overall carbon footprint.

#### **Produces Little Waste When Manufactured And Installed:**

The ability to immediately return scrap and regrind directly into the manufacturing process results in virtually no manufacturing waste. Installing vinyl cladding generates very little waste when compared to other exterior cladding.

#### **Requires Fewer Resources To Maintain:**

Unlike other exterior cladding, vinyl cladding does not require painting or colouring and only needs periodic cleaning with mild soap and water.

#### **Engineered To Last:**

Energy efficient, Low maintenance, Service life, Third-party product certification, Wind resistant, Colour retention, Water resistant, Resistant to insect damage, Chemical resistant.

## SPARK BUSINESS GROUP PTY LTD (Vinyl Cladding)

### **Balances Economic & Environmental Performance:**

In addition to its exemplary environmental performance, vinyl cladding is an economically sensible option.

### **Contributes Less To Global Warming Than Brick:**

The manufacture of vinyl cladding consumes less than half of the energy and fuel consumed in the process of manufacturing brick and mortar.

### **Releases Fewer Toxic Chemicals Than Other Exterior:**

Compared to other exterior cladding, vinyl cladding is responsible for the emission of significantly lower levels of toxic chemicals, including mercury and silver, into the environment.

### **Poses No Serious Health Risks:**

Vinyl cladding does not utilize any materials that can cause adverse health effects to installers –or to anyone.
